## Miniproject 3: Texting Lesson

**Overview:** In this miniproject you will create a lesson based off of one the learning outcomes of the course.

**Prerequisites:** Sections 1.1–1.8 in *Active Calculus*, a notion of what the key ideas are and the ability to explain them.

---

1. Getting to the Project:

Go to [overleaf.com](https://overleaf.com) to open the template. Click the link to **clone** the project. Click the link to **Sign Up** so that you can save your progress.

Now you should see a project that contains the instructions. Click on the **PROJECT** tab. Select `content.tex` to edit the material in the project.

You edit the code on the left and the output gets displayed on the right. Good luck.

2. Create a lesson based off of one of the learning outcomes of the course. Include enough detail so that any student who was learning the material for the first time could follow along and learn the material. This is your chance to explain the math in everyday language using the format of a text message.

---

**Submission instructions:** The writeup that you prepare is to be saved as a PDF file (using the PDF link at the top of the page on Overleaf) and submitted using Canvas.
