
Miniproject 3: Texting Lesson

Overview: In this miniproject you will create a lesson based off of one the learning outcomes of the course.

Prerequisites: Sections 1.1–1.8 in *Active Calculus*, a notion of what the key ideas are and the ability to explain them.

1. Getting to the Project:

Go to overleaf.com to open the template. Click the link to **clone** the project. Click the link to **Sign Up** so that you can save your progress.

Now you should see a project that contains the instructions. Click on the **PROJECT** tab. Select `content.tex` to edit the material in the project.

You edit the code on the left and the output gets displayed on the right. Good luck.

Submission instructions: The writeup that you prepare is to be saved as a PDF file (using the PDF link at the top of the page on Overleaf) and submitted using Canvas.
